

ROAD DESIGN MANUAL REVISIONS
March, 2017

APPENDIX “J” Traffic Barrier Installation Criteria (MASH) has been added to the Road Design Manual. This new appendix is a design aid for the recently released MASH compliant MGS guardrail standards which are to be incorporated in all projects advertised on and after September 12, 2017. This appendix will be expanded as more MASH compliant roadside barrier systems are developed and approved and will eventually replace Appendix “I” Traffic Barrier Installation Criteria once it is phased out.
