

## Welcome

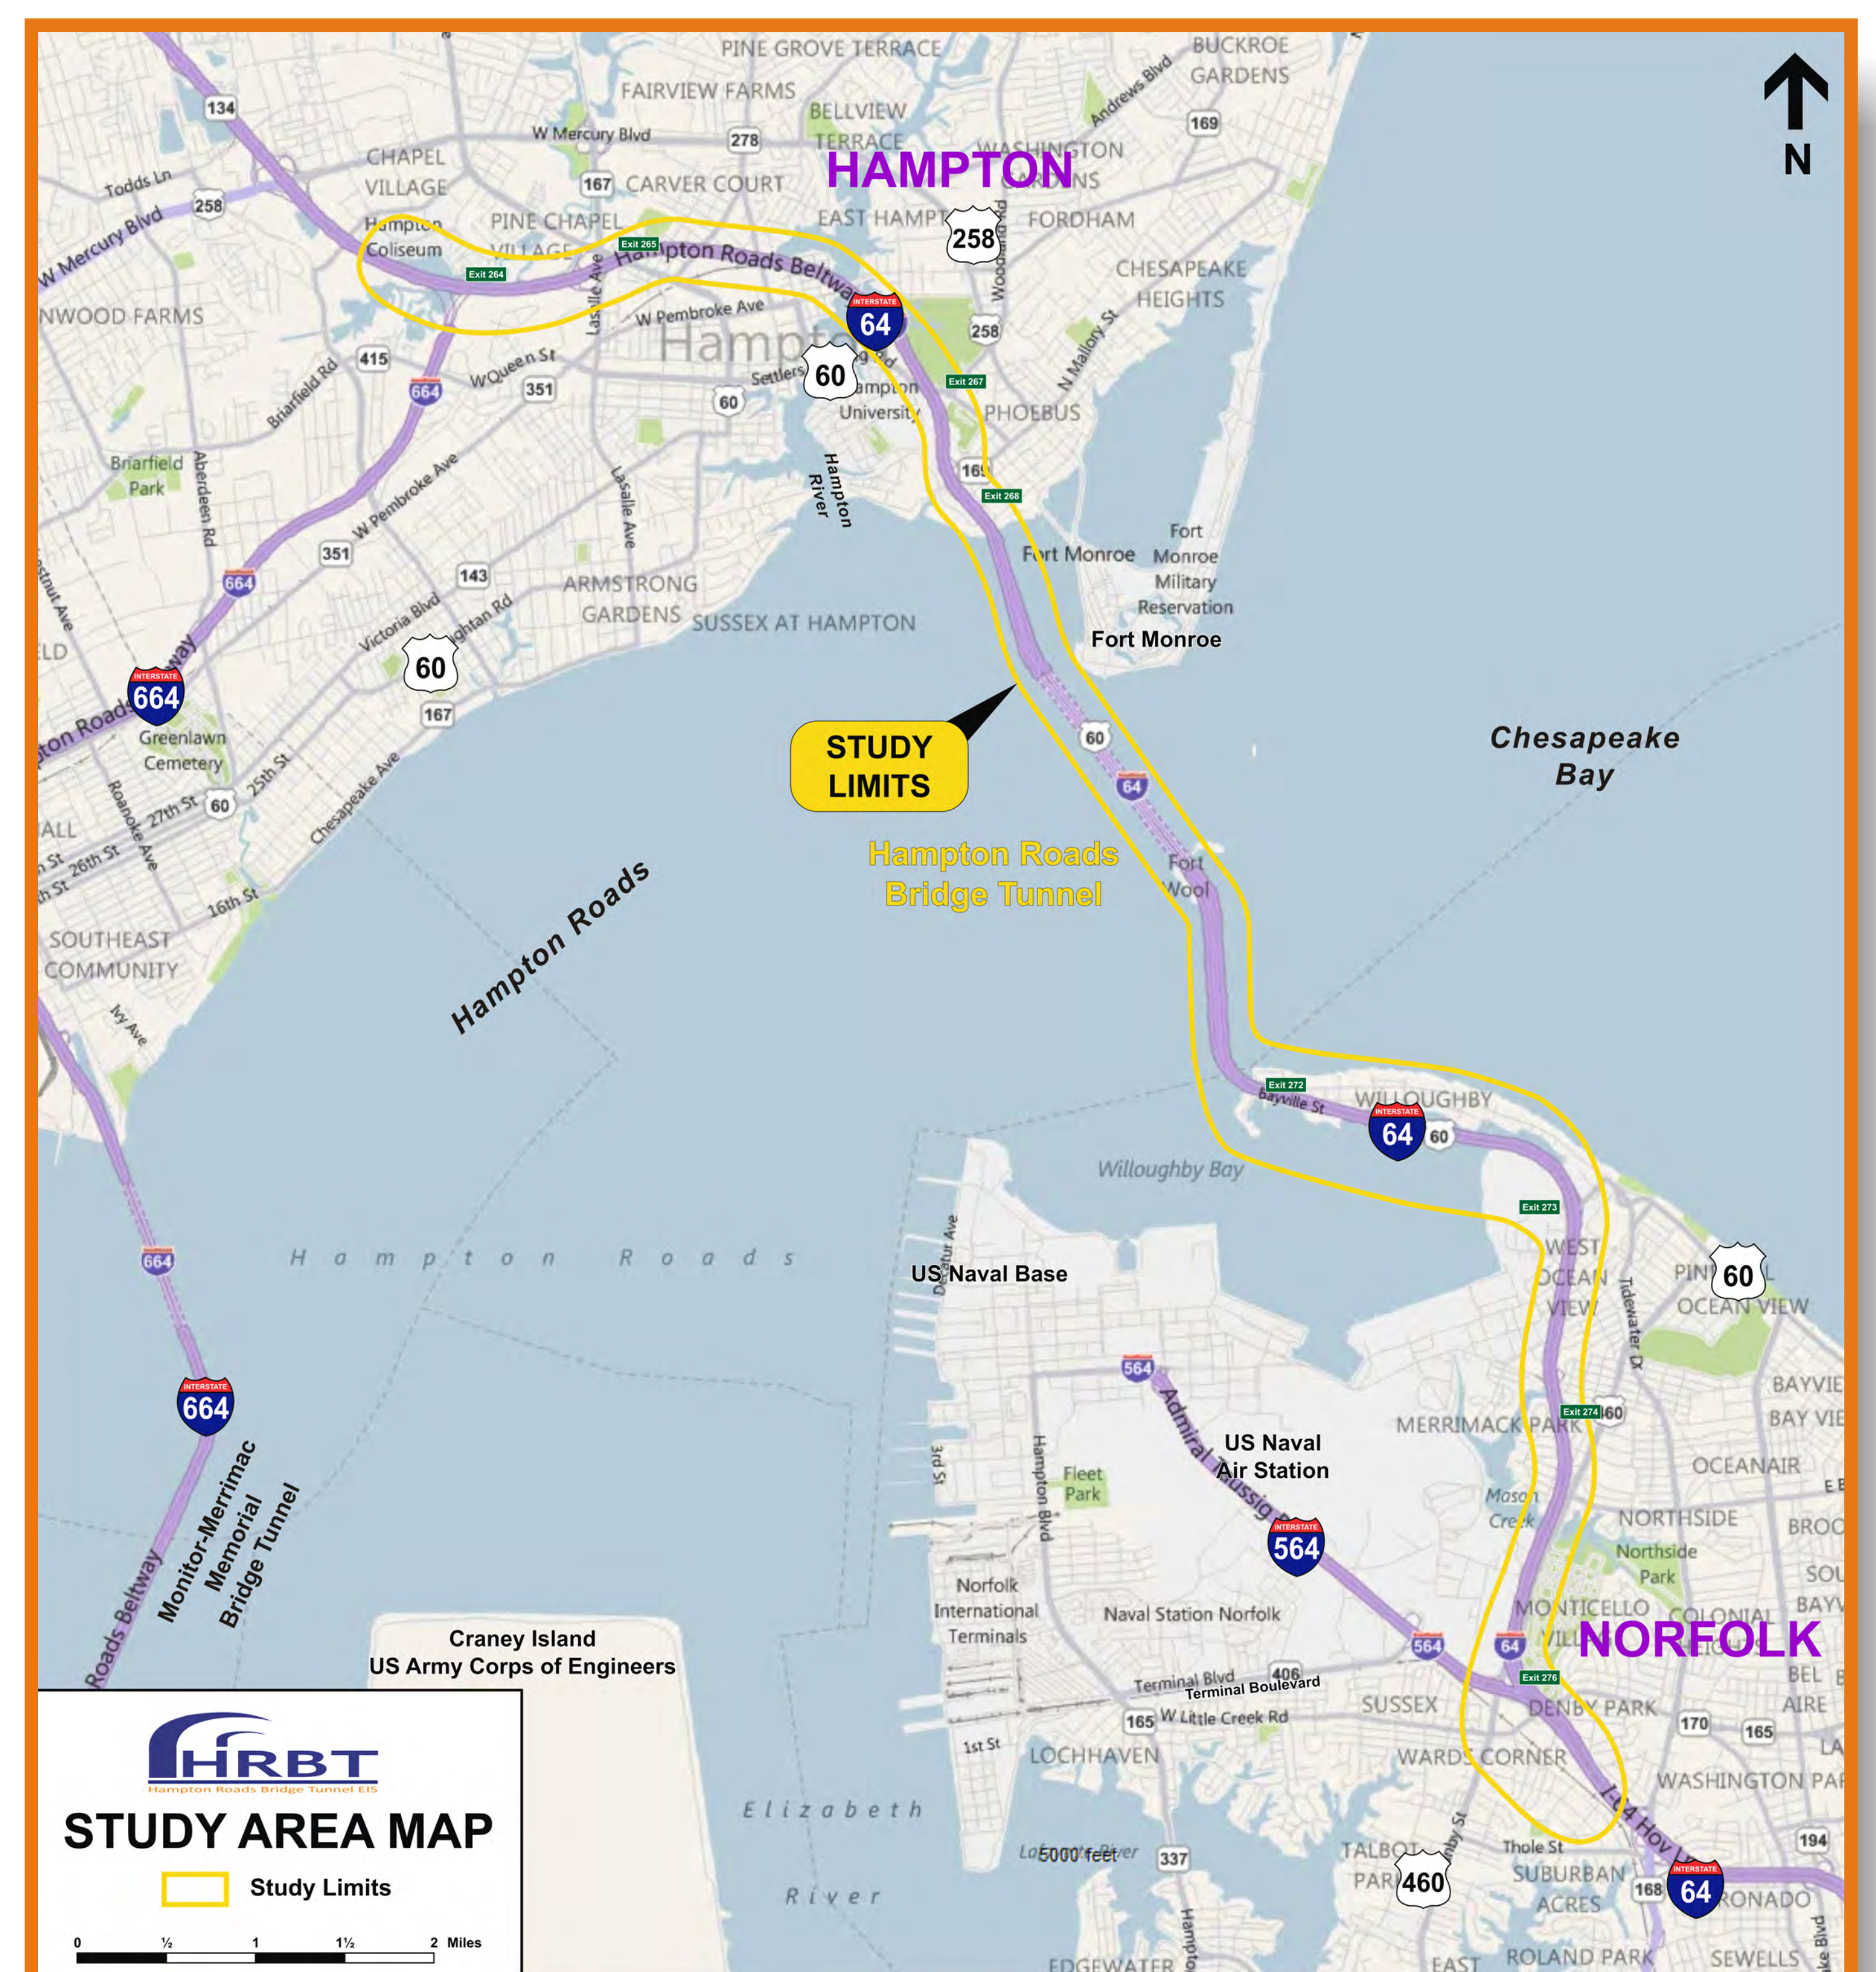

Welcome to the **Location Public Hearing** for the I-64 Hampton Roads Bridge-Tunnel (HRBT) Environmental Impact Statement (EIS).

The goals of this meeting are:

- Present the study's Retained Alternatives
- Present environmental impacts associated with the Retained Alternatives
- Provide an opportunity to gain your input on the study and the Draft EIS

## Study Purpose and Need

- The EIS study is a required step for Federal approval before design activities may proceed.
- With your assistance, VDOT identified insufficient capacity and geometric deficiencies (such as tunnel height) as the primary transportation needs in the study corridor.
- The purpose of this study is to evaluate alternative ways to address these needs.
